

RFID-enabled POS terminal

Achievement of interlock with POS system: From bar code to IC tag

<Features>

- ✎ Finalization through IC tags is achieved.
- ✎ Products such as clothing with a troublesome tags, which requires time to scan the bar code, can be easily registered.
- ✎ The prevention of twice reading in one transaction is capable to prevent errors in registration. Accurate finalization is achieved.
- ✎ Through a multi-item read operation, you can only check the products count. Checkout operation time is reduced.
- ✎ Finalization through bar codes is also available. You can even register when an IC tag is rejected or use in combination with bar coded products.
